

SQL Query Implementation for E-Commerce Database

Objectives

- Perform **SELECT, WHERE, ORDER BY** and **DISTINCT** queries.
- Search products based on **price, category and availability**.
- Retrieve **customer and product information**.
- Apply **filtering conditions**.
- Generate basic **business reports**.

SQL Queries / Code

```
SELECT * FROM Products;
```

```
SELECT * FROM Products
```

```
WHERE price < 1000;
```

```
SELECT * FROM Products
```

```
WHERE category = 'Electronics';
```

```
SELECT * FROM Products
```

```
WHERE availability = 'Yes';
```

```
SELECT DISTINCT category
```

```
FROM Products;
```

```
SELECT * FROM Products
```

```
ORDER BY price ASC;
```

Customer & Business Report Queries

```
SELECT * FROM Customers;
```

```
SELECT customer_name, email  
FROM Customers;
```

```
SELECT product_name, price  
FROM Products;
```

```
SELECT category, COUNT(*)  
FROM Products  
GROUP BY category;
```

Observation

- The SQL queries successfully retrieve customer and product details.
- Filtering helps to find products based on **price, category, and availability**.
- **ORDER BY** sorts the data, while **DISTINCT** removes duplicate values.
- The queries help generate **basic e-commerce business information**.

Conclusion

The SQL queries help to **retrieve, filter, sort, and analyze e-commerce data**. They make it easy to manage customer and product information and generate useful business reports.
